

What is Exosomes ?

Exosomes are the messenger particles that release naturally from a cell. These particles are responsible for cell-to-cell communication. Exosomes carry genetic information and proteins to cells throughout your body, creating paths for communication between cells.

What is Exosomes Facial Treatment?

Exome facial rejuvenation is a cosmetic procedure to increase skin collagen and elastin levels to enhance skin brightening and hydration. The procedure helps you overcome fine facial lines, wrinkles, and age spots. The facial exosomes are manipulated to perform certain actions, and the desired results are achieved.

Benefits of Exosome Facial rejuvenation are:

- Decreases Skin redness and irritation
 - Improves overall appearance of skin
 - Skin texture and pore size improve.
 - Improves tissue health and cellular health.
 - Increase in Fibroblast
-

How to maximize the results of Exosome?

The ideal time for Exosome facial rejuvenation is after laser therapy. It means that if you are planning to undergo a laser skin care treatment, it is ideal to have an exosome therapy so that the results can be amplified.

The best time for Exosome therapy is after the following treatments

- Laser Resurfacing
- Peels
- Microneedling
- Microneedling with Radiofrequency.

Why Exoltalia Exosome?

Exoltalia is manufactured by LEM laboratories which is an Italian based company that develop and manufacture large cosmeceutical and medical devices brands over the past 20 years with the highest European standards. We use the highest quality ingredients to ensure the efficacy and the safety.

What is inside Exoltalia Vials?

- Bovine milk Exosomes 10ppm
- Linear fibrous HA high m.w. 60 mg
- Vitamin b1 Thiamine+ b6 pyridoxine
- Reduced glutathione
- 17 different kind of essential and non-essential amino acids cluster 15 mg/ml

Why Milk Exosome?

It is Safety and Efficacy: There are several clinical studies proven the efficacy and safety of Milk Exosome. Milk exosomes are nature's abundant drug delivery carriers. These exosomes exhibit superior stability, biocompatibility, half-life, and very low immunogenicity vs the animal source Exosomes and it has efficacy higher than the planet exosomes that has shown less efficacy. The reason for Exoltalia for choosing Bovin milk exosome is to ensure the safety of the product without compromising the efficacy.

Who can Benefit from Exoltalia Treatment?

People suffering from the following Skin conditions are ideal candidates for Exosome Facial rejuvenation.

- Scaring
- Wrinkles
- Age Spots
- Sagging Skin
- Skin Hydration
- Sun damaged Skin
- Enlarged pores
- Uneven skin Textures

Protocol of Usage

Exoitalia is sterilized solution so it is safe to be injected intradermal but to maximize the result we recommend that it can be administered topically, helped by a microneedling device and the depth of the needle will depend on the area to be treated, being minimal in the eyelid area, forehead, neck and deeper in the cheek area and rest of the face. We will apply the product until we achieve uniform erythema throughout the treated area. Also Exoitalia can be applied after the following treatments and it will amplify the result of the treatment: Laser Resurfacing, Peels and Microneedling Radiofrequency.

**Number of treatments from (4-3 treatments)
with time intervals (2 weeks) between each treatment**
